Edward II Class 13 (c1314-1317/18) Overview

Class 13 coins were struck during the Abbacy of Richard of Draughton 1312-1335

Moneyers working at this period (Roger de Rede 17th May 1297 - c1319)

Class 13 is traditionally defined by the shape of the central fleur de lis, very reminiscent of a Greek battle axe having broad, flat-faced side petals.

The right-hand side fleur is damaged and shows signs of having being repaired. This is seen on all class 13 dies and can be an aid to identifying this class.

Jewels are short bent arrowheads with misshapen barbs. On one die the broken barbs have been repaired using a small round punch.

Broad flat-faced side petals to central fleur; straight sided left fleur; damaged right fleur; barbed jewels

The thin initial cross pattée of four wedges that was introduced in class 12b continues into this class.

Thin initial cross

The broken-backed "E" becomes firmly established in this class having made its first appearance in 12c. This broken letter is absent on the first die set of class 13 (Eaglen 684/685) and on the two reverses of the second set (Eaglen 686/687) indicating an overlap of die production between class 12c and 13. This broken letter continues to be used into class 14a then is gradually replaced during class 14, firstly with an open, then by a pointed back letter.

Unbroken letter "E"

Broken letter "E"

The majority of class 13 dies exhibit at least one long diagonal to the letter "N" and is similar to that found in 11b3, 11c and 12c.

The concave punch used to form the top bar of the letter "A" is also a continuation from earlier classes.

The straight sided upright used on some of the lettering seen in 11b2-12c evolves into one with concave uprights.

Single serifed terminations to the letter "S".

Single serifed letter S

The pointed chin, that is seen in earlier classes, evolves into one with a more rounded style, this rounded style then continues into class 14.

Class 13 was in issue for approximately 3 years, during this time Bury was issued with 5 die sets (one set consisted of one obverse and two reverses).
